The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M.

or M. bovis

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunogenic; Mycobacterium tuberculosis; immune response; intuberculosis; fusion polypeptide; T-cell epitope; ESAT-6; Mt pharmaceutical; vaccination; M. africanum; M. bovis; CFP7A; CFP7B; CFP19; CFP27; CFP3OA; RD1-ORF; CFP1OA; CFP16; CFP19;

The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or bovis. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CFP7A or CFP3OA or a T-cell epitope of for the induction of a strong immune response in a mammal; use of CFP7B. CFP1B or MPT59-ESAT6 or a T-cell; use of CFP2C, CFP3OA, RD1-ORF2, RD1-ORF3, RD1-ORF5, MPT59-ESAT6, ESAT6-MPT59, CFP1OA, CFP1B, CFP1B, CFP3A, CFP3B, CFP3OA, CFP3OB, CFP1B, CFP3C, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OB, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3OA, CFP3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, patteridation of the present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.
                                                                                                                                                        WPI; 2001-616774/71.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uvestis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CE lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a comple with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and ctherefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes proteins, by central integration of activity of the acnes protein, by contact did not form part of the printed specification, but was contacted in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC encoding a Proplenibacterium acnes protein. The invention also relates to CC polypeptides encoded by the polynucleotides (ABM3524-ABM64536) and to CC immunogenic fragments of P. acnes polypeptides. The invention also relates to CC additionally encompasses expression vectors and host cells comprising a CC method for stimulating an immune response specific for a P. acnes cC method for stimulating an immune response specific for a P. acnes cC method for stimulating an immune response specific for a P. acnes cC polypeptide and an isolated T cell population comprising P. acnes polypeptides, cC polypeptide and an isolated T cell population comprising P. acnes polypeptides, cC polypeptide antibodies, fusion proteins, T cell populations, or CC antigen-presenting cells that express the polypeptide); a method and kit cC for detecting or determining the presence or absence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for dagnosing, preventing or treating acnes CC polypeptides are useful for dagnosing, preventing or treating acnes CC polypeptides are useful for dagnosing, preventing or treating acnes CC protein. The polynucleotides can also be used as probes or primers for useful call not form naver of the primers for antiset of the polynucleotides are septiment of the present sequence represents a specifically claimed P. acnes polypeptide which is thought to contain an immunogenic region. Note: The sequence data for the primers for the present sequence data for the primers of the primers for the present sequence data for the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the primers of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ IDs 9692-16825 represent a group of 7134 Mayococcus xanthus proteins and peptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New substantially purified Myxococcus xanthus nucleic acid molecule encoding a nitrite reductase, useful for determining gene expression identifying mutations in a gene of interest, and for constructing mutations in a gene of interest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC sequences given in ABQ81842 and ABQ81843, or a sequence given in CC (1) as the sequence of the control of the sequence given in CC ABQ81842 and ABQ81843. Also described is a polymucleotide (II) encoding a CC fusion protein, comprising a sequence selected from 197 sequences given in ABP65258 to ABP66354 ligated in frame to a polymucleotide encoding a CC heterologous polymeptide. (I) has antidiarrheic and antibacterial CC activities, and can be used as an inhibitor of Salmonella. (I) (which is CC a probe) is useful for the detection and/or identification of CC lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM 1-2618) can be CC used for preventing and/or treating diarrhoea brought about by pathogenic CC bacteria and/or rotavirus. The carrier is a food composition selected CC products, ice-creams, fermented cereal based products, milk based CC products, infant formula, pet food or a pharmaceutical composition selected CC products, infant formula, pet food or a pharmaceutical composition concellected from tablets, liquid bacterial suspensions, dried oral CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the CC expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent confidence of the pathoacterium relared melectida sequence of the the Sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated or purified nucleotide sequences (I) from Legionella pneumophila Paris strain. (I), and their related sequences or fragments, are useful as primers and probes for detection and amplification, including differentiation between the Paris and Philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II). (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L. pneumophila. The present squence represents the amino acid sequence of a protein contain (I) are useful as vaccines and immunogenic compositions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated or purified nucleotide sequences (I) from Legionalla pneumophila Paris strain. (I), and their related sequences or fragments, are useful as primers and probes for detection and amplification, including differentiation between the Paris and philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II). (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New genome of Legionella pneumophila Paris strain and derived polypeptides, useful for detection or identification of the strain for treatment and prevention of infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (INSP)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC identity to any of the 2469 amino acid sequences, identitied in the CC specification (available on a computer readable format), or its fragment, CC expressed from 2469 of 2489 identified DNA coding regions from the CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC treating a patient by administering the protein, DNA or antibody (in a CC composition), a kit comprising first and second primers, which are the CC sequence contained within a Streptococcus nucleic acid cited above or fragments between nucleotides 8-100 of a CC sequence contained within a Streptococcus nucleic acid sequence contained within a Streptococcus nucleic acid sequence contained within a Streptococcus nucleic acid sequence where the second primer is substantially complementary to the target sequence contained within a Streptococcus nucleic acid sequence where the parts of the primers having CC substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound with the protein has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus of immunodominant proteins. They are also useful in developing vaccines, and immunodominant proteins. They are also useful in developing vaccines, contacting a certain of the printed sequence. Note: The sequence data for this patent did not form part of the printed contributions are useful for identifying contacting and introduced acid manual sequence and in electronic format directly from MIPO and the printed in electronic format directly from MIPO and the patent did not form part of the printed contributions are useful on 2707-2013 to

                                                                                                                                                                                                                                                                                                                                                                                      a Streptococcus pneumoniae genomic sequence, a fragment or degenerate variant of the polynucleotide or a nucleic acid sequence 95% identical to one of the polynucleotides. The S. pneumoniae polynucleotides and encoded polypeptides (ABB81299-ABB91674) are useful for treating or preventing S. pneumoniae infections or non-systemic diseases, e.g. otitis media, which are induced or exacerbated by S. pneumoniae. These are also useful for detecting S. pneumoniae in a biological sample or diagnosing S. pneumoniae infection in a subject. The polynucleotides have antibacterial activity and are useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Streptococcus pneumoniae polynucleotides, useful preventing S. pneumoniae infections, or non-systemic otitis media, which are induced or exacerbated by S.

The invention may be useful for the production of compounds with an antibacterial activity or for gene therapy. The nucleic acid molecules, compositions and methods disclosed are useful for treating Streptococcus pneumoniae infection. The present sequence is that of an S pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Streptococcus pneumoniae nucleic acid molecules, useful diagnosing, treating and preventing active infections of Strpneumoniae.

The invention relates to isolated Streptococcus pneumoniae nucleic acids and polypeptides. The nucleic acids and proteins are useful for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus pneumoniae polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC encoding a Streptococcus pneumoniae ADR91365 Dypeptide, or its CADR94489, ADR94800, ADR94837, ADR94969, ADR95253, ADR95682, CC ADR96079) or any of the fully defined sequences (appearing as ADR94308, CC ADR96079) or any of the fully defined sequences appearing as ADR91705, CC ADR91886, ADR92197, ADR92234, ADR93039, ADR992253, ADR95682, CC ADR91866, ADR92197, ADR92234, ADR93039, ADR93079, ADR92366, ADR92650 or CC ADR93476 or at least 40, 60 or 300 consecutive nucleotides, which is CC hybridisable under high stringency conditions to the nucleotide sequence. CC The nucleic acids and proteins are chosen from 5206 disclosed sequences. CC Also included are a recombinant expression vector comprising the isolated completed acid cited above operably linked to a transcription regulatory CC element, a cell comprising the recombinant expression vector and a probe CC comprising at least 20 consecutive nucleotides of the nucleotide comprising at least 20 consecutive nucleotides of the present conditions resulting from bacterial infection by Streptococcus pneumoniae e.g. pneumonia, bacteraemia, meningitis and CC pathological conditions resulting from bacterial infection by Ctitis media. The present sequence is one of the 2603 disclosed S. CC pneumoniae protein sequences. Note: The sequence data for this patent did conditions are the printed specification, but was obtained in CC celetronic format directly from USPTO at the conditions of the printed specification, but was obtained in conditions and directly from USPTO at the conditions of the conditions of the printed specification.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"The complete genome sequence of Mycobacterium bovis.";

Proc. Natl. Acad. Sci. U.S.A. 100:7877-7882(2003).

-i- FUNCTION: Pplases accelerate the folding of proteins. It catalyzes the cis-trans isomerization of prolline imidic peptide bonds in oligopeptides (By similarity).

-i- CATALYTIC ACTIVITY: Peptidylproline (omega=180) = peptidylproline
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PPIA_MYCBO STANDARD; PRT; 182 AA.
